

Heuristic Evaluation Report

No	Heuristic	Description of the Issue	Screenshot	Severity	Suggested Improvement
1	H1-1: Simple & natural dialog	The booking interface combines filtering, teacher selection, calendar, and time slots in one view without guiding users through a clear sequence, increasing cognitive load for new users.		2	Add a clear step-by-step flow (e.g., “1. Instrument → 2. Teacher → 3. Date → 4. Time”).
2	H1-2: Speak the users’ language	Some UI elements remain untranslated after switching language (e.g., month names), causing inconsistent localization.		2	Ensure full localization for all UI text and date formats.

3	H1-3: Minimize users' memory load	Selected time slots are not strongly highlighted, requiring users to remember their selection when navigating the interface.		2	Keep persistent visual highlighting for selected slots.
4	H1-4: Consistency	Button styles differ across screens (filled vs outlined), making it harder for users to identify primary actions consistently.		2	Standardize button styles across all pages.
5	H1-5: Feedback	Actions such as login, booking, or saving profile do not provide clear feedback (e.g., loading or success messages).	 Pic is taken after booking timeslot	3	Add loading indicators and success confirmations (e.g., "Booking confirmed").

6	H1-6: Clearly marked exits	Navigation controls (e.g; back button on login or cancel options in forms) are unclear or inconsistent, reducing user confidence.		2	Provide clearly labeled navigation actions (Back / Cancel).
7	H1-7: Shortcuts	Repetitive tasks such as adding multiple time slots must be performed manually, reducing efficiency for frequent users.		1	Add shortcuts like “repeat weekly” or bulk slot creation.
8	H1-8: Precise & constructive error messages	Error messages are generic and do not clearly indicate what went wrong or how to fix it.		3	Provide specific error messages (e.g., “Invalid email format”).
9	H1-9: Prevent errors	Form validation occurs only after submission, and errors are not shown per field, increasing user frustration.		2	Add real-time validation and field-specific error messages.

10	H1-10: Help and documentation	The system provides no onboarding guidance or explanation of features for new users.	student1 我的预订 钢琴, Beatriz 5月5日 星期二 10:30 - 12:00 删除 钢琴, Beatriz 5月21日 星期四 18:30 - 19:00 删除 钢琴, Beatriz 5月13日 星期三 19:00 - 20:00 删除 تسجيل الخروج عرض الجدول الموسيقى منصة دورة الموسيقى تأكيد التوفر التقويم Beatriz أختر تاريخاً أختر وقت البدء أختر وقت الانتهاء إضافة فترة زمنية أختر وقت البدء أختر وقت الانتهاء حفظ الملف الشخصي...
